

ABSTRACT GUIDELINES

We are aiming for high-quality fundamental scientific, translational, or clinical research on all areas of neurological illnesses. Original contributions are appreciated, however, work offering an overview of a certain topic will be considered. We also accept early data from ongoing research, theoretical work, and publications on innovative theories. The primary assessment criteria are the quality of the study, the topic's relevance to our audience, and the influence on the field.

PRESENTATION TYPES

Oral Presentation
Poster Presentation

PRESENTATION CATEGORIES

Patient Case Study
Research Study

ORAL PRESENTATION & DIGITAL POSTER FORMAT:

An oral presentation abstract provides a concise summary of your research or topic to be presented verbally at a conference. It should clearly convey the purpose, methods, results, and significance of your work. Oral presentations are typically allocated a specific time slot (e.g., 10–15 minutes) followed by a brief question-and-answer session. Oral presentations are brief talks highlighting exciting research, which can be explored in greater depth through a poster. Therefore, presenters giving oral sessions are also expected to prepare a poster for display at the conference.

DIGITAL POSTER GUIDELINES:

Maximum poster size: Height 67.7 cm x Width 38.1 cm

Ensure all text is in large, readable font

Include graphs, charts, and/or tables

Ensure contents have a logical flow

Posters will be displayed digitally onsite

Language must be in English

There will be no dedicated session for the digital poster presentation.

The digital posters will be always available during the conference hours.

Once an abstract has been accepted, the presenting author & co-authors are obligated to register for the congress to participate in the event

All submitted abstracts will be subject to peer review by designated reviewers. Authors will receive notification of acceptance or rejection by 06 February 2026.
